Household Finance Working Group  
Fontset Test Series · No. 2  
May 2026

---

## Abstract

This fake manuscript tests title-page metadata, body typography, citations, headings, mathematical notation, tables, figures, and code formatting across the available HFWG template fontsets.

**Keywords:** font testing, R Markdown, LaTeX template

---

## Acknowledgements

This synthetic acknowledgement is included to test the title-page acknowledgement block and its spacing.

---

## 1 Introduction

This paragraph exercises ordinary prose, *emphasis*, **strong emphasis**, inline code such as `median_income`, and citations (Burnham and Anderson 2002; Warren 2015). The metadata citation should also resolve cleanly (Household Finance Working Group 2026).

### 1.1 Mathematical Notation

Inline math should sit comfortably in text, as in  $y_i = \alpha + \beta x_i + \epsilon_i$ .

$$\bar{x} = \frac{1}{n} \sum_{i=1}^n x_i$$

### 1.2 Table and Code

```
summary_table <- data.frame(
  group = c("No degree", "BA", "Graduate"),
  median_wealth = c(42000, 180000, 325000),
  share = c(0.52, 0.31, 0.17)
)
knitr::kable(summary_table, caption = "Synthetic household wealth by education")
```

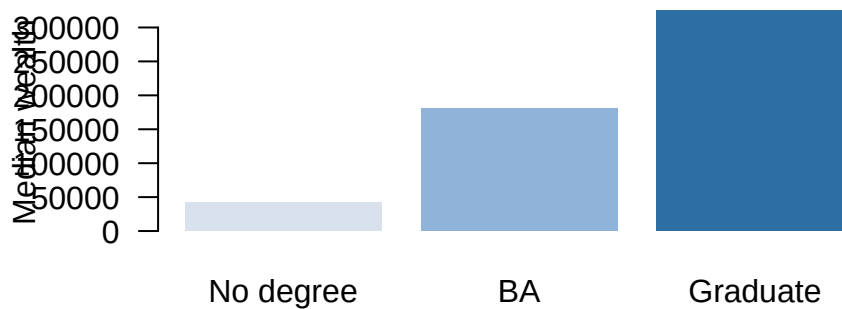

**Table 1:** Synthetic household wealth by education

| group     | median_wealth | share |
|-----------|---------------|-------|
| No degree | 42000         | 0.52  |
| BA        | 180000        | 0.31  |
| Graduate  | 325000        | 0.17  |

### 1.3 Figure

```
barplot(
  summary_table$median_wealth,
  names.arg = summary_table$group,
  col = c("#D9E2EC", "#8FB3D9", "#2E6FA3"),
```

```
border = NA,
ylab = "Median wealth",
las = 1
)
```

## 2 Conclusion

The final section gives section headings, spacing, references, and running headers a little more room to show themselves.
